Schedule of Events

September 28th, 2011	<i>The Tools and Benefits of a 21st Century Learning Environment</i>
November 9th, 2011	<i>Securing Your Facility with Video Surveillance and Access Control</i>
November 30th, 2011	<i>Managing Clients and Distributing Software to Thousands of Users</i>
December 14th, 2011	<i>Building Virtual Desktops and Thin Clients Effectively and Efficiently</i>
January 11th, 2012	<i>Cisco Collaboration: Communication and Conferencing Solutions</i>
February 1st, 2012	<i>Building Your Infrastructure with Cisco Borderless Networks</i>
March 7th, 2012	<i>ProTecht Managed Service Solutions for Your IT Environment</i>
April 18th, 2012	<i>Apple iOS Devices & Mac Desktop Management and Administration</i>

*All webinars are delivered live via Cisco WebEx, recordings will be available at www.promedianj.com after the session.

September 28th, 2011 – The Tools and Benefits of a 21st Century Learning Environment (10:30 AM)

A 21st century learning environment is an important way to ensure student engagement and participation to foster high quality learning, as well as digital and technological literacy. This webinar will show how technology can help to immerse a student in the world of 21st century learning by keying in on important topics such as:

- In-Classroom Audio (How & Why to use it), including the SAFE system
- Interactive Whiteboards and the advantages they provide through hands-on student involvement
- RM EasiTech software that can provide curriculum enhancement
- Integration of multimedia applications and sources in the classroom
- How all of these facets work together to create a 21st century learning environment

November 9th, 2011 – Securing Your Facility with Video Surveillance and Access Control (10:30 AM)

The modern physical security system is moving away from the old standard of a system of closed circuit cameras and monitors to a system fully in sync with your organization's network infrastructure. In addition, modern physical security networks combine video surveillance systems with card access technology and building management over the existing data network. Topics in this webinar will include:

- IP camera integration within an existing data network, with options of a wired connection with PoE or wireless connectivity
- Centralized control of the video surveillance network to a remote site
- Access control systems such as card readers and their integration capabilities with video surveillance
- Integration of intercoms, video, and access technology to facilitate effective, efficient building management

November 30th, 2011 – Managing Clients and Distributing Software to Thousands of Users (Microsoft SCCM) (10:30 AM)

The burdens of Operating System Image Deployment & Management and Software Distribution can be lessened with a proper client management solution. Client management enables the management of thousands of computers from a central console. The webinar will focus on:

- Discussion of the pluses and minuses of different solutions on the market.
- Microsoft's System Center Configuration Manager (SCCM) software
- Participants will learn how to deploy Windows 7 using SCCM to 4000 machines, how to assign software to a particular room or building using 2 commands, and how an onsite technician can spend 10 minutes to rebuild an infected computer through a real-world case study
- A basic understanding of operating system imaging and Microsoft Active Directory is recommended

December 14th, 2011 – Building Virtual Desktops and Thin Clients Effectively and Efficiently (10:30 AM)

A Virtual desktop environment provides IT administrators with ease of management and administration by providing the capability of managing and deploying desktops from a central administration console. Virtual desktops can run off of thin clients or mobile devices lowering costs and enabling remote access. The webinar will include:

- Discussion of the pluses and minuses of different solutions on the market.
- Participants will learn how to deploy Windows 7 through VMware View, how to deploy software to multiple Virtual Desktops at once, how to build fresh Virtual Machines within minutes after a user logs out, and how to scan Virtual Desktops for viruses without impact to I/O through a real-world case study
- VMware View will be featured and attendees will also learn about VMware's client for iPad, which is PCoIP compatible
- Attendees will learn about WYSE PocketCloud View client for Apple devices
- A basic understanding of operating system imaging and Microsoft Active Directory is recommended.

January 11th, 2012 – Cisco Collaboration: Communication and Conferencing Solutions (10:30 AM)

Cisco mobile collaboration solutions enable you to be in touch anywhere. Let Unified Communications level the playing field irrespective of location, bandwidth, or end device. In this webinar:

- Find out why industry analysts are calling this the "post-pc" era and what it means for you, your end users and how it's transforming the way we communicate.
- Cisco Unified Communication systems including phones and conferencing solutions
- Mobile collaboration apps for popular platforms
- The brand-new Cisco Cius and what makes it uniquely valuable.

February 1st, 2012 – Building Your Infrastructure with Cisco Borderless Networks (10:30 AM)

Cisco Borderless Networks connect people, information, and devices -- securely, reliably, and seamlessly. Connect anyone, anywhere, on any device, at any time. This webinar will focus on:

- How to take advantage of an end-to-end portfolio of unique switching and routing solutions for Borderless Networks optimized for investment protection to reduce Total Cost of Ownership.
- How Cisco Routers and Catalyst switches offer new ways to build scalable networks based on highly secure, reliable, seamless, and integrated solutions and service offerings.
- The new enhancements that transform the network to support changing needs and support innovation.

March 7th, 2012 – ProTecht Managed Service Solutions for Your IT Environment (10:30 AM)

Promedia's ProTecht Service Solutions provide a proactive system that delivers remote and on-site support of your technology infrastructure. These services improve the efficiency and reliability of network operations proactively as opposed to the traditional reactive approach. The session will describe the different options and plans that are available under the ProTecht banner. This webinar will also detail the benefits of Promedia's ProTecht Service Solutions including:

- Maximized Availability – 24x7 Access to the Network, Increased Uptime, Greater Productivity
- Safeguarding of Assets – Inventory Control, Protect Data, Ensure Reliability
- Cost Effectiveness – Manageable fixed costs for predictable budget planning
- Optimization of IT Staff Resources – Allow staff to focus on technical developing and planning

April 18th, 2012 – Apple iOS Devices & Mac Desktop Management and Administration (10:30 AM)

Apple iOS Device and management is becoming a prevalent topic for many IT administrators. In today's environment, as iPads, iPod Touches, and other dynamic products become viable educational and business tools, it is important to have a way to efficiently and securely manage these devices. Learn how you can manage these devices alongside your Mac Desktops. Topics in this webinar will include:

- Discussion of the options and technologies available to manage Apple iOS devices
- Up to date summary of Apple's management framework
- Discussion of mobile device management tools such as the Casper Suite from JAMF Software
- Discuss how Casper Suite can address the major tenets of Mac OS X client management
- See sample workflow used to support thousands of iPads

We hope that you can join us for all of these webinar events. Attending each one should give you an understanding of the specific technology solution. Taken as a whole, the topics of these webinars can come together to provide you with a top notch, end-to-end solution that can elevate the performance of your organization.
